

input text x

paraphrase class $\{x_1, \dots, x_m\}$

read each dimension with a validated encoder

canonicalization to the anchor space

assemble the tensor, 9 axes plus identity attack

decide where validated,
escalate where not

hash-chained audit proof

the defense of Sec. ??, built at inference time. A refusal leaves one member, which is escalated scores averaged over the class. Every score carries its validation record

thresholds frozen in a versioned artifact (Sec. ??)

records class hashes, refusal flag, provenance
