Auditable means you can replay the judgment, and the regime that made it

full_response	NORMAL	EMERGENCY
Margaret	**0.185 forbid**	**0.705 prefer**
Daughter	**0.402 neutral**	**0.902 prefer**
EMS crew	**0.318 forbid**	**0.902 prefer**
Agency	**0.200 forbid**	**0.802 prefer**

DEME's scores: stand_by 0.834 → full_response 0.804; stand_by inverts to 0.307

elevation gate: detector 0.97 ≥ 0.90 → GRANTED
scope: paramedics only. Auto-reverts. Both edges audited.

conf 0.89 → REFUSED. Fallback: human review plus the EMS call, with no record share. A spurious emergency unlocks nothing.

worst-off shifts Daughter → Margaret (scoped privacy cost)
Shapley authority: Margaret-led → EMS-led

Three DecisionProofs: normal, emergency, and the elevation edge

Elevation is authenticated, bounded and audited. $ python -m erisml.examples.care_robot_regimes reproduces every number.
